4	YASMIN BATRISYIA BINTI ZAHIRUDDIN	A23CS0201

Report abstract

This report of Task 6a is for the construction and deployment of a comprehensive network system for the newly constructed building at the Faculty of Computers (FC). The key objectives include identifying user and customer requirements within budgetary constraints, researching and selecting appropriate network devices, and implementing an optimized IP addressing scheme. The project scope includes careful planning, device selection, network configuration, and robust documentation of all processes and decisions made. The new building will feature advanced facilities, including labs, hybrid classrooms, a video conference room, and a student lounge with seamless WiFi connectivity, supporting FC's goals for technological advancement and operational efficiency. So, it is assumed that there will be enough funds available, that new technologies will seamlessly work with current systems, and that the network capacity will be able to handle the expected increase in users and technological needs. Enhancing overall performance, ensuring robust defence against network advances, and offering affordable solutions for FC's long-term operations demands are the goals of this project.

6.1 introduction

The focus of the project was on constructing and deploying a complete network system for the new building constructed at the Faculty of Computers. The project is as a result of the expected increase in the number of staff and students in the coming years with the aim of making certain the new construction can sufficiently cater to the present needs and any future expansion. This effort is intended to increase the overall performance and connectivity, by building a network. The network should be easy to scale up in the future while being safe and dependable.

To achieve this, the project will focus on several key objectives.. It first partakes a keen identification of user and customer requirements which will be based on the set budgetary figures. This step is critical in defining the practicality and the tangible aspects of the computer Faculty's requirements to the proposed network design. Following this, the network design will be able to address current issues, taking into consideration those issues that may arise in the future.

Another objective of the project will research and find appropriate network devices. In this case, FC's objectives will require an elaborate analysis of the competition in regards to availability, suitability for the FC's objectives, pricing, and services. The project would entail the designing and assigning of network IP addresses which is one of the ways of ensuring optimal performance of the network.

The project scope involves realistic planning, building control of the complete network plans. This includes the formation of a capable team, conducting a preliminary analysis, selecting devices, setting up the network, and applying a robust IP addressing scheme. Every detail of their work is documented in order to provide adequate reporting that reflects the work done and the decisions made during each phase of the project.

In order to complete the issued task, several assumptions were made. The first is that the available budget by the management will be enough to acquire the necessary network infrastructure and will not reduce the quality or performance. Another assumption is based on the technological solutions that are aiming to be purchased, integrated seamlessly with the existing at FC. Finally, this project assumes that the expected increase in the number of users and their technological requirements will not exceed the designed capacity of the network to operate.

6.2 Project background and an overview of the client's current status and issue

At the moment, the Faculty of Computing (FC) employs 1800 undergraduate and graduate students, 100 faculty members, and 40 support staff members. They predict that during the following four years, both the number of students and academic staff will increase by 15%. FC intends to construct a facility to support this expansion in a brand-new, two-story building. Four new labs, a hybrid classroom, and a video conference room for online project meetings will all be placed in one new structure. A student lounge will also be located there, providing a space for students to work and unwind while using WiFi to connect to the network.

However, maintaining a dependable, effective, and secure network infrastructure is a difficulty that comes with this ambitious goal. FC envisions a systems with easily manageable, scalable technology that improves performance, guarantees strong defense against network intrusions (such as denial-of-service attacks, Internet worms, and threats to e-business applications), and supports high-performance operations for their core backbone—all while preserving user access and attaining cost-effectiveness without putting a strain on the company's finances over time.

Basically, FC is setting off on an ambitious and purposeful journey into the future, driven by the goal of developing a cutting-edge and flexible learning environment that maintains continuity and accessibility for its wide range of users. With its dedicated labs and focus on network infrastructure, the new building's construction is positioned to satisfy FC's academic community's changing needs while maintaining a balance between innovation, scalability, and affordability for years to come.

6.3 Compiled Solution for Task 1-5

Task 1 :  network comm - task 1.pdf

Task 2 :  TASK 2.pdf

Task 3 :  Netcom task 3.pdf

Task 4 :  network comm - Task 4.pdf

Task 5 :  netcom task 5 (1).pdf

6.4 Conclusion

We are therefore at the completion of this project, which has successfully designed and implemented a scalable, reliable, and secure network infrastructure for the new two-story building at Faculty of Computing (FC). Among our major achievements are the correct identifications of the user requirements, exhaustive planning of the network infrastructure, careful selection of the network devices, and precise network IP addressing. Each of these milestones helped in a strong network design to meet the current and future needs of FC.

Our strengths are embedded in thorough research by the team and in teamwork, ensuring that decisions are always informed and for the good of the project. In addition, each phase, from the initial planning to the final implementation, was handled systematically to show our capability to manage complex network design tasks.

Although the project had sufficient time for each phase, one minor weakness was the underestimation of the initial complexities in integrating advanced technologies for high-speed internet usage in education. This required further learning and adaptation to optimally apply the solutions. Besides, the selection of high-quality devices within a balanced budget was quite challenging and really highlighted the need for more extensive cost-benefit analyses in future projects.

We feel that any future developments may require more careful preliminary analysis to duly anticipate the potential roadblocks in integrating technology. Further refining the budget management process, to facilitate more strategic and balanced decisions of cost versus performance, will help as well.

In conclusion, this was a very eye-opening project for me on all aspects of network designing, where a systematic planning, good coordination and flexibility were the keys to success.

6.5 Team Members and responsibilities

Group Name: CommNet crew Section: 02			
Group Members:			
No.	Member Photo	Information	Responsibilities
1.		NAME: MUHAMMAD MUKHRITZ AL IMAN BIN MOHD RAFFI MATRIC NO: A23CS0250	As a group member of CommNet crew, I am responsible as leader to make sure that every task is completed. Other than that, i am also responsible to schedule our meeting to discuss and divide the task about the project. I am also responsible to check every work before submit it to the lecturer.
2.		NAME: AHMAD ADIB ZIKRI BIN A.MAZLAM MATRIC NO: A23CS0205	As a group member of the commNet crew, I am responsible for creating google docs for every task. Then, I am responsible to finish the part in every task accordingly within time.
3.	SYARIFAH DANIA BINTI SYED ABU BAKAR 	NAME: SYARIFAH DANIA BINTI SYED ABU BAKAR MATRIC NO: A23CS0183	As a group member of the commNer crew, I am responsible to do certain task's meeting minutes and complete the task that is assigned for me. I also take part in helping other group members to complete their task if an emergency comes up.

4.		NAME: YASMIN BATRISYIA BINTI ZAHIRUDDIN MATRIC NO: A23CS0201	As a group member of the commNet crew, I'm responsible do meeting minutes that we have so that we could keep track of everything that we've been discussing. Then, I also have responsibilities to help each of my group members if they face any difficulties, and they also help me too. Then in every task, I have to complete my task accordingly within the time given.
