

Individual Contribution

Muhammad Naim bin Abdullah

As the leader of our development team, I take full responsibility for ensuring that all aspects of our system run smoothly. I actively oversee the project's progress, making sure that every component is developed efficiently and within the given timeframe. I also take the initiative to anticipate potential challenges and address them proactively to maintain the system's stability and performance.

One of my key responsibilities in the project is managing the Clerk Module, which focuses on the functions and operations that clerks can perform within the system. I ensure that the module is designed to be user-friendly, efficient, and aligned with the system's overall objectives.

In addition to my development role, I also contribute to the documentation process by preparing essential technical documents such as the Software Requirements Specification (SRS), Software Design Template (SDT), and Software Design Document (SDD). These documents serve as the foundation of our system, ensuring that all functionalities are well-defined, structured, and systematically implemented.

When it comes to coding, I make it a priority to complete my assigned tasks early. This allows me to allocate time to assist my teammates when needed, ensuring that all system functionalities work as expected. By collaborating closely with the team, I help troubleshoot issues, optimize code efficiency, and maintain coding standards to produce a high-quality system.

During Industry Day, I played an active role in representing my team. I took the lead in showcasing our system to evaluators, clearly explaining its features, functionality, and benefits. I also answered technical and conceptual questions from evaluators, demonstrating our system's capabilities and the value it brings. My role in this event was crucial in effectively communicating our hard work and dedication, as well as receiving valuable feedback for further improvements.

This project has been a challenging yet rewarding journey, and I am proud of what we have accomplished together.

Muhammad Mukhritz Al Iman bin Mohd Raffi

As a committed team member, I ensure my active involvement in every meeting and discussion, which allows me to communicate clearly and collaborate effectively with my colleagues. I consistently share my ideas and listen intently to the perspectives of others, fostering a culture of teamwork and mutual respect. This open communication and adherence to our team leader's guidance have been essential in keeping our project on track and meeting our set milestones.

My most significant technical contribution lies in the development of the ALK module, a vital component of our system. Within this module, I implemented the functionality to verify loan applications—automating the process to approve or reject user requests based on established criteria. Additionally, I developed an annual report feature that provides a clear overview of membership application statuses, whether pending, accepted, or rejected. I also integrated functionalities to add new ALK members and clerks, enabling them to log in securely and perform their designated roles. To ensure the system's robustness and accessibility, I took charge of hosting it via Hostinger, making it accessible through koperasikada.site. This strategic integration not only improved the efficiency of our processes but also enhanced the overall user experience.

In addition to my coding responsibilities, I contributed significantly to the project's presentation and documentation aspects. I developed and refined our presentation slides for the KADA Cooperative, ensuring that the system's features and benefits were communicated in a clear and engaging manner. Furthermore, I played an active role in preparing the comprehensive project report, documenting every critical detail of our work—from design to deployment. This thorough documentation has provided a solid reference for future enhancements and ensured transparency for all stakeholders involved.

Yasmin Batrisyia binti Zahiruddin

As a team member, I have made sure to attend and participate in all aspects of the project by actively participating in every meeting. I also commit to keep the lines of interaction open with my fellow group members and to respond quickly to any project-related updates or changes. I set a high value on productive teamwork by paying attention to and taking seriously the input of my team members, and I constantly follow the instructions given by our group leader. In addition, I actively provide ideas to every meeting to further enhance our product. I aim to support an organized and effective project development process by taking a proactive approach to communication and teamwork, creating a positive and productive environment within our group.

I am in charge of the loan module. In this module, I have implemented code to create a platform that allows users to apply for loans easily. Before filling in the forms, I developed a loan calculator function that helps members estimate their loan repayment amount, interest rate, and repayment duration, allowing them to plan ahead. I also created the loan application form with a user-friendly interface, where it automatically extracts the user's general information and prompts them to fill in additional required details, such as guarantor information, proof documents, and more. I also implemented validation so that if members do not follow the required format, the form highlights the incorrect fields in red and prompts them to enter the correct information. After completing the loan form, members can check their loan status through a function I developed, which retrieves updates from the clerk and ALK. This required close collaboration with my team to ensure smooth functionality. Lastly, I am responsible for the module that handles membership withdrawal from Cooperative KADA. I created a simple form where members can state their reasons for leaving.

In addition, documentation is considered crucial to a project's success. I created a data dictionary and developed several diagrams before starting the code implementation, including use case, sequence, activity, and conceptual model diagrams. I also contributed to the preparation of presentations, such as creating slides to guide our client during the presentation. Additionally, I was involved in conducting user testing with the client. Furthermore, I participated in preparing

documentation such as the SRS, SDD, STD, and Database P1, P2, and P3 related to the module I was responsible for. Overall, my individual contribution to this project includes completing all tasks related to the loan module and member resignation function, along with the necessary documentation and design tasks. My dedication to coding and documentation reflects my commitment to ensuring the project's success and achieving client satisfaction.

Syarifah Dania binti Syed Abu Bakar

As a dedicated team member, I make it a point to attend every meeting, ensuring clear and consistent communication with my teammates. I actively contribute to discussions by sharing my insights and ideas, helping us refine our approach to building a well-structured and user-friendly system. I also make sure to listen to my team members' perspectives, valuing their input and working collaboratively to resolve challenges. By maintaining open communication and following the guidance of our leader, we have been able to stay on track and meet our project milestones efficiently.

Beyond discussions, I have been actively involved in the documentation process, working closely with my team to produce key project documents, including the Project Proposal, SRS, SDD, STD, and ERD. My focus has been on maintaining clarity and accuracy, particularly in sections related to the User module, ensuring that every detail is well-documented for future reference. By contributing to these documents, I have helped create a strong foundation for our project, making it easier for both developers and stakeholders to understand the system's design and functionality.

My primary responsibility in this project revolves around the User module, which includes key functionalities such as registration, login, logout, and profile management. I worked on implementing a smooth and intuitive registration process, ensuring proper validation to prevent duplicate accounts and enforce required fields. For the login and logout features, I focused on securing the authentication process while maintaining a seamless user experience. In the manage profile module, I developed the functionality that allows users to edit their profile details while ensuring validation rules are met for data accuracy. Through these implementations, I aimed to provide users with a straightforward and efficient way to interact with the system.

Apart from coding and documentation, I also contributed to non-technical aspects of the project. I was involved in editing and refining our presentation slides, ensuring they effectively conveyed our system's purpose and functionality. Through this experience, I have not only strengthened my technical skills but also improved my teamwork, problem-solving, and communication

abilities. Being part of this project has been a rewarding experience, and I am proud of what our team has accomplished together.
